RE: LED double faced sign 3'-4"x 7'-0"  
19 mm full color LED message center  
National Signs Drawing # NS08 12063 Revision B

Dear Mr. Smith,

We are pleased to confirm the following information in respect to the new LED sign to be manufactured and installed in front of the City Hall.

Included in this proposal are the following:

- Five year warranty including parts and labor on all items required for the LED sign to remain fully operational with no exclusions.
- Installation of initial software and upgrades for five years
- Installation of all communication devices
- Software with over 250 easy to use clip art and animation files
- Five year technical support on-site and off-site
- Sign will be build to meet all sign code ordinance requirements
- We will install the foundation, pole structure and sign as well as the wireless communication device which will be hardwired into one of your computers. This is a turn key project for everything except primary electric power to the sign. Two 120 volt, 20 amp circuits will operate the sign. The wire to link the radio transceiver to your computer is 50 or 100 feet long. To reach further we can tie the transceiver into your network. If there is no network we have an additional way to achieve an additional 250 feet. Our technical support specializes in this area.

Total investment for this sign is \$33,524.00 plus permits. Permits equal \$350.00 for our procurement fee plus the permit from the City at cost. Please let us know how we may be of further service. We are the largest producer in the United States installing these top quality LED systems.

Sincerely,

Patton King
