

Water Department

303 N. Beeline Highway  
Payson, AZ 85541  
Phone (928) 474-5242  
Fax (928) 474-7C52

**IMPORTANT NOTICE:** Customer must install and maintain in proper working order a temperature and pressure relief valve on the hot water heater or boiler. Customer water pressure may build up due to water expansion when water is heated. Excessive pressure may cause bodily injury or system damage if a temperature and pressure relief valve is not installed per Payson building code regulations.

## TYPICAL RESIDENTIAL WATER METER INSTALLATION

The illustration below depicts a typical new residential water meter installation. The Payson Water Department's responsibilities in this situation includes the installation of a water service line from the town water main to a location necessary to serve the customer and the installation of a meter valve, water meter, check valve and water meter box and lid. The customer's responsibilities include the installation of a customer owner union, shutoff valve, drainage system and optional pressure reducing valve (in areas of high water pressure) and a suitable pipe access to those devices. The customer is responsible to protect the service, including the check valve from freezing at all times.

**IMPORTANT NOTE:** Under no circumstances is the customer to interfere in any way with the water meter or attempt to operate the Town's meter valve.

ITEMS 5, 6, 7, 8, 9, AND 10 ARE TO BE FURNISHED, INSTALLED AND MAINTAINED BY THE CUSTOMER
