## O'Hare Flight Pattern Changes/Airport Noise

Recent changes to Federal Aviation Administration (FAA) air traffic policy, in conjunction with the City of Chicago's O'Hare Modernization Program (OMP) have led to a reconfiguration of runway patterns at O'Hare International Airport. This reorientation has shifted the flow of planes to a predominant east-west traffic pattern, with the majority of aircraft arriving from the east and departing to the west. As a result, areas directly east and west of O'Hare have been exposed to increased overhead flight traffic.

The Federal Aviation Administration has released the Draft Re-Evaluation of the O'Hare Modernization Environmental Impact Statement for the Proposed Interim Fly Quiet Runway Rotation Plan. This draft can be reviewed at

[http://www.faa.gov/airports/airport\\_development/omp/ifq\\_re\\_eval/](http://www.faa.gov/airports/airport_development/omp/ifq_re_eval/).

This report analyzes and discloses the potential environmental impacts associated with the Proposed Interim Fly Quiet Runway Rotation Plan.

The FAA is seeking comments from Federal, State and local agencies and the public regarding the Draft Re-Evaluation. A series of public workshops related to the Draft Re-Evaluation will be held on the following dates:
